

Identifying Functional bQTL: From Peak-Based to Genotype-Based Testing

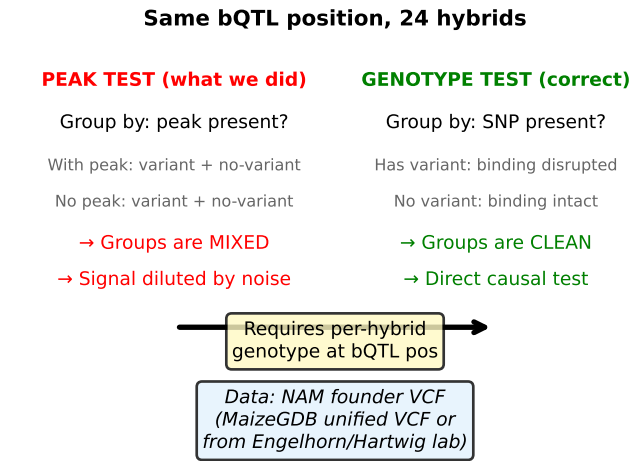

A. Peak-based test: uniform
(0 of 13,458 survive FDR)

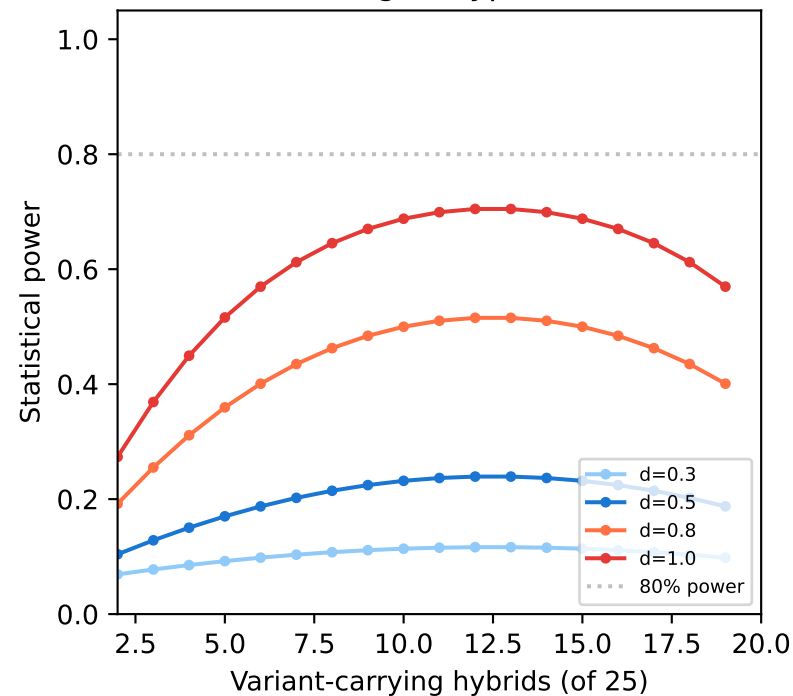

B. QQ plot: no inflation

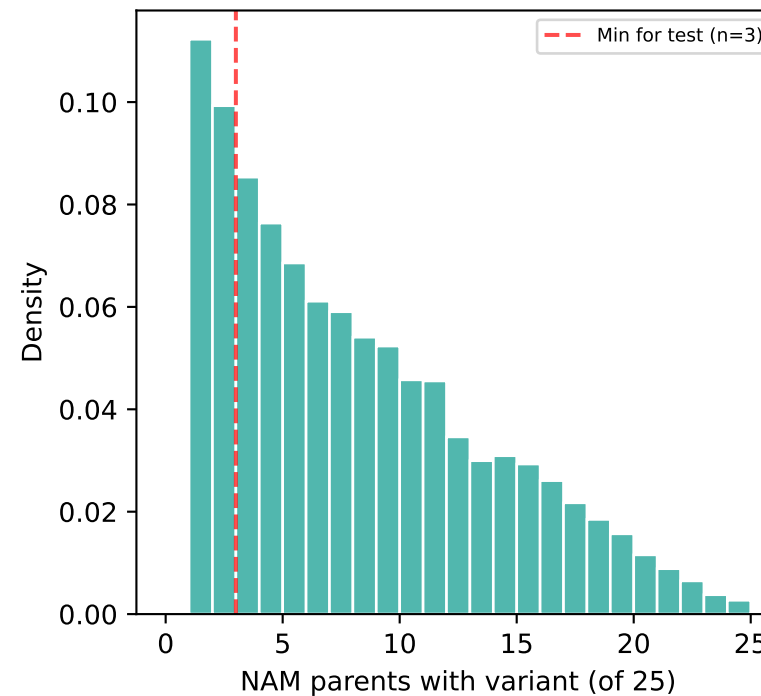

C. Peak vs genotype grouping

D. Power for genotype-based test

E. Expected carrier distribution
(79% testable with $n \geq 3$)

F. Aggregate burden: weak signal
($\rho=0.057$, $p=1.7e-11$)
